EDUCATION

RIMT University

Bachelor of Technology in Computer Science and Engineering; CGPA: 7.6

Mandi Gobindgarh, Punjab

Aug. 2023 – May 2027

EXPERIENCE

Institutional Training in MERN Stack

June 2025 – Present

RIMT University

Mandi Gobindgarh, Punjab

- Developed a full-stack web application using HTML, CSS, React, JavaScript, Express.js, Node.js, and MongoDB
- Prototyped a GitHub activity visualization tool to help instructors track student collaboration patterns in classroom repositories

PROJECTS

Linux Hub | *Next.js 16, React 19, Tailwind CSS v4, NextAuth.js* | [GitHub](#)

- Built a full-stack crowdfunding platform for open-source Linux maintainers using Next.js 16 (App Router), React 19, and Tailwind CSS v4, inspired by "Buy Me a Coffee" but themed for the Linux community
- Implemented GitHub OAuth authentication using NextAuth.js for secure one-click signup, and designed dynamic, server-side rendered profile pages displaying repositories, follower stats, and a supporter leaderboard
- Integrated Razorpay payment gateway supporting preset and custom donation amounts, with configurable API key management in a dedicated user dashboard
- Built a responsive, Linux-themed dark UI featuring glassmorphism cards, gradient borders, animated background orbs, and a neofetch-style ASCII terminal widget

Personal Password Manager | *React 19, Express.js 5, MongoDB, Vite* | [GitHub](#)

- Developed a full-stack password manager using React 19 (Vite), Express.js 5, and MongoDB, implementing complete CRUD operations via a RESTful API — an upgrade from an earlier localStorage-based version
- Built a RESTful backend with 4 API endpoints (GET, POST, PUT, DELETE) using the MongoDB native driver for direct database interaction, with CORS and dotenv for environment management
- Implemented optimistic UI updates where client state updates immediately on save/edit/delete, followed by an automatic backend re-sync to keep data consistent
- Designed a modular React component architecture with form validation, a scrollable password table, and inline edit/delete actions using React Icons

SkillBridge | *Next.js 16, React 19, MongoDB, JWT, Chart.js* | [GitHub](#)

- Architected a full-stack skill gap analysis platform using Next.js 16, React 19, and MongoDB (Mongoose), featuring 20+ API endpoints and 12+ pages across 6 industry sectors (AI/ML, Cybersecurity, Data Science, Cloud, Green Energy, Web Dev)
- Built a resume parser extracting skills from uploaded PDF/DOCX/TXT files using pdf-parse and mammoth, matching against 100+ industry keywords to auto-detect sector and generate a readiness score
- Implemented a gap analysis algorithm comparing user skills against sector requirements, and an interactive analytics dashboard with Chart.js (Bar + Radar) visualizing demand vs. supply and market trends
- Secured the platform with JWT-based authentication and bcrypt password hashing, and built a progress tracker with subtopic-level completion auto-computed via Mongoose pre-save hooks

ACHIEVEMENTS

Top 30 Finalist – ROBOMAN AI 2026 / Next Quantum 3.0 Vibe Coding Hackathon, Dept. of CSE, Gulzar Group of Institutions (Feb 2026)

TECHNICAL SKILLS

Languages: C/C++, JavaScript, HTML/CSS

Frameworks: React, Node.js, Express.js, Next.js

Databases: MongoDB, Mongoose

Developer Tools: Git, Docker, VS Code, Neovim, Linux, Google Antigravity, Claude Code

Libraries: Bootstrap, Tailwind CSS

Problem Solving: DSA in C++ – arrays, hashing, sorting, prefix sums
